PROFESSIONAL SUMMARY

Highly versatile and results-driven **Full Stack Web Developer** and **Software Engineer** with nearly 2 years of experience architecting, building, and optimizing scalable, real-time web applications. Proven expertise in modern web stacks including **TALL** (Tailwind CSS, Alpine.js, Laravel, Livewire) and **VILT** (Vue.js, Inertia.js, Laravel, Tailwind CSS). Expert in **Front-End Engineering** (creating responsive User Interfaces, Single Page Applications, and utilizing React, Next.js, and TypeScript) and **Back-End Architecture** (designing secure RESTful APIs, implementing MVC design patterns, database indexing, and role-based access control). Experienced in real-time server-side communications (WebSockets, Laravel Reverb) and data caching pipelines (Redis). Highly skilled at integrating AI-assisted workflows (Cursor IDE, Copilot) to accelerate coding velocity and ensure clean, maintainable, and secure software development.

TECHNICAL SKILLS

- › **Programming & Languages:** PHP (Laravel, MVC, OOP), JavaScript (ES6+), TypeScript, Go (Golang), SQL, HTML5, CSS3
- › **Front-End Engineering:** React, Next.js, Vue.js, Inertia.js, Alpine.js, Livewire, Tailwind CSS, Bootstrap, HTML5 Canvas API, State Management, Responsive Web Design, UI/UX Design, Cross-Browser Compatibility, DOM Manipulation
- › **Back-End Architecture & Security:** MVC Architecture, RESTful API Development, JSON API Design, JWT, Server-Side Validation, Authentication & Authorization, Role-Based Access Control (RBAC), Input Sanitization, SQL Injection & XSS Protection
- › **Real-Time & Caching Systems:** WebSockets, Laravel Reverb (Event Broadcasting), Redis (caching, queues, ring-buffers), Peer-to-Peer (P2P) WebRTC DataChannels (SCTP)
- › **Databases & Storage:** PostgreSQL, MySQL, Supabase, Relational Database Management (RDBMS), Query Optimization, Schema Design, Database Indexing, Query Plan Analysis
- › **DevOps, Platforms & Tools:** Version Control (Git/GitHub), VS Code, Cursor IDE, Cloudflare, DigitalOcean, Vercel, Render, CI/CD pipelines

PROJECTS & EXPERIENCE

Practicum Trainee – Full Stack Developer

Social Security System (SSS) Pagadian Branch | April 2026

- › **Context:** Modernized manual logbook record-keeping procedures to digitize counter operations, reduce counter visitor queue congestion, and establish secure, audit-ready digital transaction records.
- › **Front-End:** Designed and engineered a responsive Single Page Application (SPA) entry form using Vue.js and Inertia.js. Integrated search-autocomplete filters to dynamically map SSS transaction types, and embedded an HTML5 Canvas-based Signature Pad for secure digital sign-offs.
- › **Back-End:** Structured a secure PostgreSQL database schema on Supabase to index daily visitors. Enforced strict server-side validation rules and RESTful API endpoints for secure, encrypted transaction submissions.
- › **Result:** Automated manual counters operations, reducing counter logging overhead times by 40% and achieving 100% database write integrity across branch operations.

Capstone Developer – Full Stack

Saint Columban College / Oct 2025 – Mar 2026

- › **Context:** Solved peak-hour campus canteen order lines by designing a real-time ordering, pre-booking, and reservation platform.
- › **Front-End:** Programmed a reactive, component-driven client reservation dashboard using the TALL stack (Tailwind CSS, Alpine.js, Laravel, Livewire), including live-updating menu cards and server-synced checkout forms.
- › **Back-End:** Integrated WebSocket event broadcasting via Laravel Reverb and configured Redis memory caches to serialize inventory checkouts, preventing race conditions on concurrent database orders.
- › **Result:** Decreased student line queues by 50% and boosted operational service responsiveness by 40% with instant, real-time menu status propagation.

Freelance Developer – Full Stack

Fuel Gas Slips Management System / Nov 2025

- › **Context:** Automated document verification pipelines and slip approvals by designing a secure workflow automation dashboard.
- › **Front-End:** Crafted an administrative dashboard layout using Tailwind CSS, implementing client-side validation rules and client-side UI permissions masks.
- › **Back-End:** Built a secure PHP Laravel MVC approval engine featuring custom Role-Based Access Control (RBAC), relational database transaction pooling, and automated PDF invoice generation.
- › **Result:** Reduced document processing latency by 60% and raised reporting transaction accuracy by 35% through optimized MySQL index scans and query tuning.

EDUCATION

Saint Columban College, Pagadian City, ZDS

Bachelor of Science in Information Technology / 2022 – 2026

- › **PhilNITS IT Passport Certification** – Passed (April 27, 2025)

› Provincial HACK4GOV Cybersecurity Challenge – 3rd Place, Team "FOURSHAKEN"

PROFESSIONAL SKILLS

Critical Problem-Solving | Technical & Client Communication | Database & Performance Tuning | RESTful API Integration | Cross-Device & Responsive Testing | Agile Development | Clean Code & Maintainable System Architecture
